Project Design Phase-I

Proposed Solution

Date	20 October 2022
Team Id	PNT2022TMID04854
Project Name	Skill and Job Recommender
Maximum Marks	2 Marks

Proposed Solution :

S.No	Proposals	Description
1	Problem Statement	A recent report claims that most college graduates have difficulty in choosing their domain in their job. Many engineers are trying to shift the domain from their field to IT. So, they are doing some courses in online and randomly searching for a job. Nowadays, IT fields are the targets of many students but they don't know which domain is fit for them. To avoid this situation candidates, need a Job recommendation that analyses the skills to recommend a suitable job for the candidate.
2	Solution Description	The application to be developed should be accessible from anywhere and any devices that are connected to the internet. The application should allow the user to search for the suitable job based on their skillset.
3	Uniqueness	Many Applications provide a suitable job based on the skills in addition to this our work includes the chatbot, where the user can put their queries and get the solutions for their skills and also can accessed from anywhere.

4	Social Impact	The Job opportunities increases. Employees get the suitable job for their skillset.
5	Business Model	Right now the application is profitless but in future we might add an option of premium plans for advanced searching of jobs.
6	Scalability of the Solution	Compare to other application this app provide more options based on the filter. And it provides the chatbot to solve their queries they have.
